

BLACKBIRD

**WHO,
WHAT,
WHERE,
WHEN**
COMPREHENSIVE CHANGE
MONITORING

Real-time auditing and security compliance for Windows File System

Your company's file system contains business critical resources, intellectual property and other sensitive information. A single, unintended change can put your entire organization at risk — impacting productivity with service interruption and introducing the costly risk of security breaches and non-compliance. Yet, native auditing tools place unnecessary overhead on the server and are cumbersome, requiring enormous resources to wade through vast amounts of audit entries; and the lack of centralized auditing and reporting fail to paint the entire picture of your file system activity.

KEY BENEFITS

- Track the WHO, WHAT, WHERE, WHEN for any file system modification to a centralized auditing database
- Receive instant alerts on critical changes to minimize risk
- Eliminate the need for native auditing and the associated overhead on your servers
- View the before and after values for any change for easier troubleshooting
- Simplify the creation of reports with a built-in reporting library and custom reporting wizards
- Easily rollback any unwanted permission changes

Blackbird auditor for Windows File System enables tighter security and control over File System resources across the enterprise. It tracks, alerts and reports on all key share, file and folder changes in real time, so administrators instantly know the "WHO, WHAT, WHERE, WHEN" for any modification.

Track user activity with comprehensive auditing for all critical changes

Blackbird auditor for Windows File System captures all the essential information for any modification, including who made the change, when and from where. For every event, Blackbird captures the before and after values to clearly highlight the change and reduce the effort required to troubleshoot. Blackbird auditor for Windows File System provides the originating IP address or hostname of the computer where a change was made — enabling you to more accurately and rapidly isolate root cause users or programs that may be making inappropriate changes in your file system environment.

**REAL-TIME
AUDITING, ALERTS,
AND SECURITY
COMPLIANCE FOR
WINDOWS FILE
SYSTEM**

Streamlined compliance with centralized, automated File System reporting

Blackbird auditor for Windows File System turns raw data into *meaningful and actionable* reports to tighten security across the enterprise. Advanced change monitoring capabilities ensure your organization is complying with external regulations such as HIPAA, SOX, or PCI, as well as prove to auditors that corporate policies for compliance have not deviated over time. A built-in reporting library offers out-of-the-box reporting templates, while a custom reporting wizard makes it easy to create custom reports and alerts on any AD change, including flexible filtering on every field.

With Blackbird auditor's scheduled reporting, you can run reports against the central auditing database and automatically email reports to auditors, security officers, and business data owners. Blackbird auditor for Windows File System translates all events into simple English that can be easily understood by non-administrators.

24x7 Real-time alerts for enhanced security

With instant alerts, Blackbird auditor with Windows File System enables administrators to quickly react to and resolve critical changes that can impact the security or availability of your Windows environment. Administrators can instantly rollback an unwanted permission change to its previous state..

Blackbird Management Suite: seamless lifecycle management

Blackbird auditor for Windows File System is part of the Blackbird Management Suite, a fully integrated, end-to-end solution that seamlessly guides administrators through the entire identity and access lifecycle - from real-time auditing of AD and Windows File System, to compliance reporting, proactive safeguards and recovery. A single dashboard provides a consolidated view for unprecedented ease and efficiency in identity and access management.
