

Centralized view of enterprise access

Understanding who has access to Active Directory (AD) and Windows resources is critical to any security or compliance initiative. Blackbird privilege explorer automates the process of security analysis and reporting - providing a scalable and cost-effective way to manage network resources across the enterprise. By deploying intelligent agents, privilege explorer offers a centralized view of enterprise access, ensuring the right people have access to the right resources to minimize data theft, security breaches, or system attacks.

With Blackbird privilege explorer, administrators can easily:

KEY BENEFITS

- Report on access permissions on files, folder and shares in your environment
- Understand the exposure of your sensitive information and intellectual property
- See where an account or group has rights to ensure they have the appropriate access to the just those resources they need for their job
- See current settings or compare permissions over time with live and historical reporting
- Instantly drill down to find out how access to a resource was granted and rollback any unwanted changes through seamless integration with the Blackbird Management Suite
- Use report filtering to block out inheritance, making it easy to see the explicitly set rights and scope to

- Report on who has access to resources for SOX, PCI, HIPAA and other compliance mandates
- Figure out who had access to a resource when an issue occurred
- Provide data owners with reports on who can access their data
- Compare permissions overtime for specific resources and drill into the integrated logs of blackbird auditor to see how these permissions were changed
- Easily rollback permissions to a known good state to adhere to corporate

Tighter security and control over access and permissions

Understanding who has access to your sensitive information and File Systems is critical to any security and compliance initiative. Whether it's permissions that were granted to user no longer in the appropriate role for the resource or unauthorized additions, permission violations often go undetected — putting your entire enterprise at risk of data theft, security breaches, service disruption or non-compliance with government regulations.

Blackbird privilege explorer for Windows File System enables tighter security and control over File System resources across the enterprise. It offers a centralized view of access and privileges, so administrators clearly know who has access to which resources and understand the exposure of your company's sensitive information and intellectual property. With Blackbird privilege explorer for Windows File System, you can be sure that users have access to the resources they need to do their job, and only those resources. Obsolete or rogue permissions are quickly identified and corrected. As a result, you can be sure that all access permissions comply with corporate policies, as well as external regulations like Sarbanes-Oxley, HIPAA, Gramm-Leach-Bliley, and PCI.

Report on access permissions on files, folders and shares

Blackbird privilege explorer for Windows File System provides a centralized and comprehensive view of all managed file resources, enabling administrators to view, report, and analyze security permissions across the enterprise. With both live and historical reporting, administrators are able to see the current permissions settings, as well as compare permissions over time. In short, Blackbird privilege explorer provides you with the tools needed to protect company data, enforce internal policies and ensure adherence with external compliance regulations.

Instantly drill down to rollback changes

Seamless integration with the Blackbird Management Suite offers unparalleled ease and efficiency for managing any anomaly or security configuration, such as when an unauthorized user has been granted access to sensitive resources. Administrators can instantly drill down on any privilege to find out how access to a resource was granted — and then click to rollback the change to return to the previous state with the appropriate access privileges set. There's never been an easier or stronger way to protect corporate data and resources.

Powerful reporting capabilities

Blackbird privilege explorer's powerful reporting capabilities deliver the documentation and data needed to identify violations, and prove compliance to auditors and managers. Advanced filtering allows you to quickly target access reports to specific resources, users/groups, permissions and/or dates. You can filter out inheritance rights to focus only on explicitly set rights. And comparison reporting lets you easily understand how permissions have changed between two points in time.

Stronger security without over-extending your IT resources

By streamlining and automating reporting on file system activity, Blackbird privilege explorer lets you strengthen your data security and compliance strategy, without burdening your IT staff. Blackbird Management Suite eliminates the time-consuming manual tasks once associated with data collection and security reporting. With scheduled reporting, you can run reports against the central database and automatically email them to administrators, security officers and business data owners.
