

BLACKBIRD
privilege manager™

WORKFLOW BASED DATA GOVERNANCE

BLACKBIRD
Management Suite™

Automated policy enforcement for Active Directory and network resources

Protecting data and preventing unregulated access to network resources is vital for any enterprise - particularly given the increased focus on IT security and regulatory compliance. Yet even in the face of increased security demands, companies still need a flexible way to ensure that authorized employees, customers and partners can access the resources they need.

KEY BENEFITS

- Manage entitlements to files, folders and other Windows resources
- Meet compliance and security initiatives with repeatable data governance process
- Protect critical data and network resources with secure and automated internal controls
- Automate user and group provisioning to reduce data management risks and costs
- Comprehensive audit trail for full transparency

Blackbird privilege manager enables companies to meet security and regulatory requirements, while freeing IT from the burden of requests to add, change, or revoke user access. By streamlining workflows for authorizing, activating and revoking entitlements in AD, privilege manager empowers data owners to provide strict entitlement processes to prevent unregulated and unauthorized access to resources.

Workflow-based data governance

Privilege manager's workflow process enables data owners to control access and changes to their resources without infrastructure changes or business disruption. It brings together data owners, end users, reviewers and approvers in a forum for communicating, authorizing, and activating entitlements.

- *Data owners:* configure workflows for managed data resources
- *Users:* request access to shares, folders, files
- *Reviewers:* review access requests
- *Approvers:* approve access requests

**AUTOMATED
POLICY
ENFORCEMENT FOR
ACTIVE DIRECTORY
AND NETWORK
RESOURCES**

Tighten Active Directory security and ensure compliance

Given the sheer number of access requests across the enterprise, manual provisioning tools are simply not sufficient to meet compliance requirements for Sarbanes-Oxley, HIPAA, Gramm-Leach-Bliley, and other regulations. By automating provisioning and revocations, Blackbird privilege manager ensures that the entitlement management process is strictly enforced without exception. And, Blackbird provides a comprehensive audit trail for full transparency and seamless reporting for compliance documentation.

Reduce administrator workload without compromising security

Blackbird privilege manager eliminates the time-consuming manual tasks once associated with provisioning. Its seamless workflow process and intuitive interface enable data owners to perform necessary provisioning tasks without burdening IT administrators. And by automating group and user policy management, privilege manager virtually eliminates provisioning errors, while simultaneously reducing IT support costs and time.

**Blackbird Management Suite:
seamless lifecycle management**

Blackbird privilege manager is part of the Blackbird Management Suite, a fully integrated, end-to-end solution that seamlessly guides administrators through the entire identity and access lifecycle - from real-time auditing and compliance reporting to protection and recovery. A single dashboard provides a consolidated view for unprecedented ease and efficiency in identity management.

Blackbird privilege manager ties in with Blackbird auditor - showing which access changed for a managed resource. Data owners can review and filter access reports to easily see who has access to their data. In seconds, they can drill down on any privilege or event to find out who made the change - and then create a proper workflow process for future assignments. There's never been an easier or safer way to protect corporate data.

About the Blackbird Group

The Blackbird Group is a leader in identity and access management. Blackbird's innovative solutions help organizations make the most of their technology investments and Windows infrastructure — with simpler compliance, streamlined governance, increased IT efficiency, and greater application availability. The Blackbird Group is a Microsoft Gold Certified Partner with more than two million installed seats worldwide. Founded in 2002, the Blackbird Group is a privately held company. Corporate headquarters are in Manhattan, New York with offices located throughout Europe. For more information, visit www.blackbird-group.com.
