

Directory Synchronization Management

Directory Transformation Manager provides significant milestone wins in Identity Management projects by delivering meta-directory benefits from existing investments in Microsoft Active Directory. DTM turns AD into an authoritative repository for identity information by synchronizing most databases and identity stores with AD. By utilizing transforms (scripting) in the product, DTM also provides the capability for provisioning and de-provisioning, and can map business processes to automation. DTM is also frequently utilized as a tool to rapidly join organizations undergoing M&A activity as well as a simple cleanup tool to gain accuracy and consistency within the directory.

An Identity Management Solution Already Exists in Your Organization!

Identity data is constantly changing within an organization. New hires, (adds), transfers/promotions (modify), and retirement/RIFs (deletes) are typically entered into a human resources (HR) system. Quite often, changes to the rest of the internal systems are handled through various manual processes including phone calls, help desk tickets, emails, and sneaker-net. This introduces time delays, decreases accuracy, and eats up valuable time from valuable resources.

What if? HR made one entry and the other systems were automatically changed, a new employee was provisioned in the directory with an email account and initial password, the facilities manager knew about the new person and already had them in their directory, and the individuals new manager had an email confirming everything was set up? What if it could all happen the day the person arrive? Or - What if you need to join two organizations and get them communicating quickly? Maybe even the same day! And how about when you want to synchronize contacts to/from your CRM system, fax server directory, live communications directory, facility directory etc.? Look to DTM 3 to provide these solutions.

"We wanted a solution that could deliver rapid benefits promised by the thicker identity management solutions without all the hardware, database and cost requirements," "Imanami was the only company that met all of our requirements".

Rapid ROI: Automate to Maintain Accurate & Consistent Data

Want one source for your directory information? Turn Microsoft Active Directory into a meta directory. Imanami Directory Transformation Manager (DTM) allows you to synchronize multiple directories and databases with your Active Directory or Microsoft Exchange 5.5 directory. DTM reduces the cost of miscommunication, since when your Global Address List (GAL) is accurate, users are more productive. Our customers tell us DTM can help them improve the accuracy of their GAL by a minimum of 15%. This translates to value for your organization, both for your users and your bottom line. Many DTM users realize a return on their investment in less than four weeks.

Key Features Provided

Multiple Data Source Support

DTM synchronizes virtually any data source with Exchange and Active Directory. With DTM, you can import users from other databases, LDAP sources or other email systems like Notes, into Exchange or Active Directory. Use DTM in migration or update projects to synchronize two Exchange organizations or separate forests.

Provisioning

Use DTM to provision your Active Directory users. When DTM detects a new person in HR that is not in Active Directory, it can create the user. It can even mail-enable the user (Exchange) or create a contact instead, useful when connecting a CRM solution to Active Directory.

Transforms

DTM can transform data from the source into acceptable data for the destination. Transformation Choices: Join, Static, Resolve Substring, Left or Script in VB, .Net Use script to create your own field transforms using Visual Basic .Net and DTM's integrated Script Editor. In a similar manner, you can also write scripts to dynamically determine where to create new objects within Active Directory or Exchange.

Preview

Run "what If" scenarios to see what would happen before it happens. DTM's Preview Feature lets you see what would change when the job is run without making any changes in the target system.

Enterprise Console

The DTM Console gives you a bird's eye view of all your DTM jobs including information on when they will run, when they last run, how many objects were updated, created, deleted or unchanged.

Configure Notifications

DTM can notify you via email when a job runs. The notification includes whether the job succeeded or not, how many records were changed and the log file as an attachment.

Power Tools

DTM can be customized to connect with many other directories, identity stores, or databases. DTM can also be customized to map automation to your specific business processes. Contact Imanami professional services at support@imanami.com to discuss configuration of specific "power tools" to meet your needs.

Key Benefits

Deployment

The key differentiation of DTM verses other solutions, including meta directories, is in deployment. DTM typically deploys in hours or days verses months or years. Get a quick win for your department by simply connecting HR with AD!

Easy Enterprise Integration

DTM does not require a separate database and can be installed on any workstation or server with network connectivity to the source and destination data sources.

Ease of Use

DTM's Job Wizard simplifies the job creation process. The Wizard allows you to just drag and drop fields for replication.

Bi-directional Support

DTM can perform bi-directional updates simply by creating two jobs.

System Requirements

Operating System

Microsoft Windows 2000 (Professional, Server, or Advanced Server) with the latest Windows service pack and critical updates available from the Microsoft Security Web site.
Microsoft Windows XP Professional
Microsoft Windows Server 2003 family

Multiple Data Source Support

Import Sources:

- Sun ONE Directory Server / iPlanet (LDAP)
- Oracle
- Active Directory with Exchange 2003/2000
- Microsoft Exchange 5.5
- Microsoft SQL Server
- Microsoft Excel
- Microsoft Access
- Text Files including CSV
- Adacel View500 (LDAP)
- Lotus Notes (LDAP)
- Novell Directory Services (LDAP)
- Any LDAP Version 3.0 compliant data source
- Any ODBC compliant data source

Export Destinations

- Sun ONE Directory Server / iPlanet (LDAP)
- Oracle
- Active Directory with Exchange 2003/2000
- Microsoft Exchange 5.5
- Microsoft SQL Server
- Microsoft Excel
- Microsoft Access
- Text Files including CSV
- Adacel View500 (LDAP)
- Lotus Notes (LDAP)
- Novell Directory Services (LDAP)
- Any LDAP Version 3.0 compliant data source
- Any ODBC compliant data source

About Imanami

Imanami develops software that delivers Point Solutions for Identity Management. We focus on the high value milestones that you can realistically accomplish today and provide the quick wins, meaningful ROI and increased end user satisfaction that helps ensure internal company support for your IdM rollout.
