

WHY DESKTOP POLICY MANAGER?

Desktop Policy Manager (DPM) secures and configures systems accurately, with less effort and more confidence, using existing Windows technology to ensure future compatibility!

For IT Administrator who are concerned about desktop security but don't have time to learn the tools, **DPM** provides a way to secure and configure systems accurately every time without having to learn or install new technology. To guarantee future compatibility, **DPM** does not use proprietary agents or scripts.

Desktop Policy Manager provides an intuitive web interface for managing desktop configuration using Group Policy. You never have to see the GP Editor—never have to think about where to link a GPO or what permissions to apply. Just select the policy templates to include (e.g. drive mappings, application restrictions, IE security, etc.) and the computers or users to target, and DPM does the rest!

KEY FEATURES

- **Web-based interface** for quicker configurations—no proprietary client agents to install!
- **Approval-based workflow** creates a “firewall” to prevent costly configuration mistakes
- **Uses native Group Policy technology** to ensure future compatibility
- **Simplified targeting of users and computers** with “SmartApply”
- **Create customized “profiles” of configuration** for computers and users
- **Computer and user templates for desktop lockdown, application restrictions, security configuration, drive and printer mappings, group membership control, power management, system services security and more.**
- **Full support for additional policies via PowerShell**
- **And more...**

PRODUCT REQUIREMENTS

Operating Systems Supported for Installation:

Recommended: Microsoft® Windows® 2003, Microsoft® Windows® Server 2008 (IIS/ASP.Net required)

Memory:

Minimum 20MB free RAM

Hard Disk:

Minimum 20MB free disk space

Additional Requirements:

Microsoft® .NET Framework 2.0, Microsoft® Group Policy Management Console (GPMC), Microsoft PowerShell 1.0
