

# Account Terminator by Avatier

Automated Cross-Platform Account Deprovisioning

**ACCOUNT TERMINATOR** POWERED BY AVATIER IDENTITY MANAGEMENT SUITE Version 7.0.09111

## Account Terminator

- account info
- disable account
- delete account
- enable account
- manage queue
- cancel

### THE CHALLENGE:

Today's enterprises are at greater risk of security breaches than ever before as the workforce is continually being redefined by acquisitions, reorganizations and workforce reductions. As a result, the problem and expense of tracking who has access to what systems is becoming a top priority, heavily regulated both internally and externally by corporate auditors and government regulations. To combat this issue, IT organizations are starting to recognize that timely elimination of dormant accounts from their various systems will result in lower network management costs and better protection from security breaches.

### THE SOLUTION:

Account Terminator empowers your IT staff with the ability to securely disable and/or delete dormant or unwanted employee user accounts across multiple platforms through an easy-to-use administrative web portal that provides a complete and in-depth audit trail. With Account Terminator, you can harden overall network security and ensure compliance with corporate and government regulations such as Sarbanes-Oxley, Gramm-Leach-Bliley and HIPAA. It even integrates with Microsoft Identity Information Server (MIIS) or any other automated process to help lower costs and drive improved operational efficiencies 24x7.

## Key Features:

- Automated user account deprovisioning across multiple platforms
- Proactive monitoring and alerting
- Automated Exchange mailbox archiving
- Home directory archiving and share removal
- Delayed account delete
- Automatic administrator notification on retry
- User & Group exemption
- Extensive change and activity auditing
- Automated delivery of both summary and detailed usage reports
- Parallel processing
- Expanded platform support

## Reduce Exposure by Eliminating Overlooked Accounts

When dormant accounts and newly departed employee accounts are deactivated in one swift action across all platforms, IT organizations are better able to control access and reduce opportunities for security breaches across the enterprise. Better asset management also reduces software license and maintenance costs.

## Increase IT Efficiency by Automating Account Termination

Through delegated administration and task automation, it is possible to securely offload the administrative burden of account deactivation from central IT groups.

## Drive Enterprise-Wide Security and Compliance

To ensure compliance with regulations stemming from HIPAA, Homeland Security, Gramm-Leach-Bliley, and Sarbanes-Oxley, it is vital that organizations have proper controls to system access that include the necessary levels of auditing and reporting. With Account Terminator, you can get summary and detailed usage reports of all account deletions, disables, and enables can be sent hourly, daily, weekly, or monthly to system administrators.

## Business Intelligence 101 (Bi101)

Business Intelligence 101 provides you with unparalleled insight into the world's leading network management software. With Bi101, you can rest assured that you're making the most intelligent business decision when purchasing and implementing solutions for the security and compliance, identity and access, and infrastructure management of your enterprise network.

Through disciplined, proactive research and unsurpassed industry knowledge, Bi101's solutions are easy to implement, even easier to manage, and provide a proven return on investment throughout every step of the technology lifecycle.
