

What's New in ChangeAuditor 4.6?

ChangeAuditor 4.6 Now Includes Local Exchange Auditing Coverage

Award-winning ChangeAuditor provides complete, real-time change management that drives network availability and productivity with proactive auditing, in-depth forensics and comprehensive reporting on all key configuration changes in Windows.

With ChangeAuditor 4.6, NetPro enhances the breadth of its Exchange auditing capabilities with local Exchange auditing capabilities covering owner and non-owner mailbox events to improve compliance and security. ChangeAuditor 4.6 also includes approximately 100 new built-in Exchange and SQL reports covering topics such as message read by non-owner, message deleted by non-owner, mailbox store dismounted and message permanently deleted by owner, and SQL events such as audit drop database, adding logins to server roles, database deletions, and audit add login and adding members to database roles. ChangeAuditor 4.6 also supports clustered configurations for Exchange 2000, 2003, and 2007.

New Features Include:

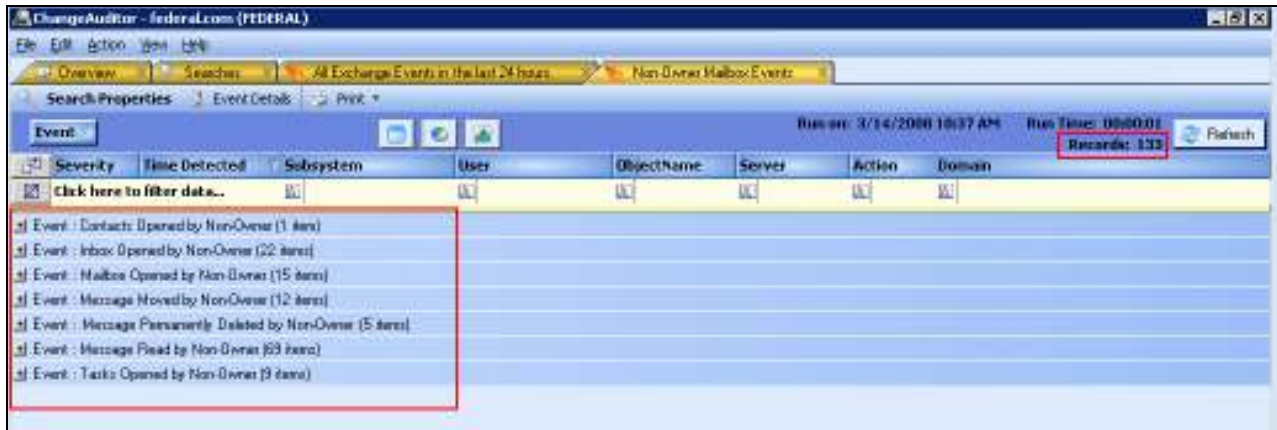

- **Local Exchange Auditing Covering Owner and Non-Owner Mailboxes.** ChangeAuditor 4.6 provides information on administrators and users who have gained access into another users' mailbox, allowing organizations to quickly learn who accessed, deleted, copied, moved or created emails from that mailbox. ChangeAuditor 4.6 also provides in-depth auditing and tracking of owner mailboxes to ensure internal policies are being met.

Key audit events include:

- Message Read, Copied, Moved, Created, or Permanently Deleted by Non-Owner
 - Folder Permissions Changed
 - Inbox, Calendar, or Tasks Opened by Non-Owner
 - Mailbox Store Mounted or Dismounted
 - Message Read, Permanently Deleted, Created or Copied by Owner
- **New Exchange and SQL Reports.** ChangeAuditor 4.6 includes ~100 new reports on Exchange owner and non-owner events as well as SQL events. New reports cover topics such as message read by non-owner, message deleted by non-owner, mailbox store dismounted and message permanently deleted by owner, and SQL events such as drop database, adding logins to server roles, database deletions, and audit add login and adding members to database roles.

Key reports include:

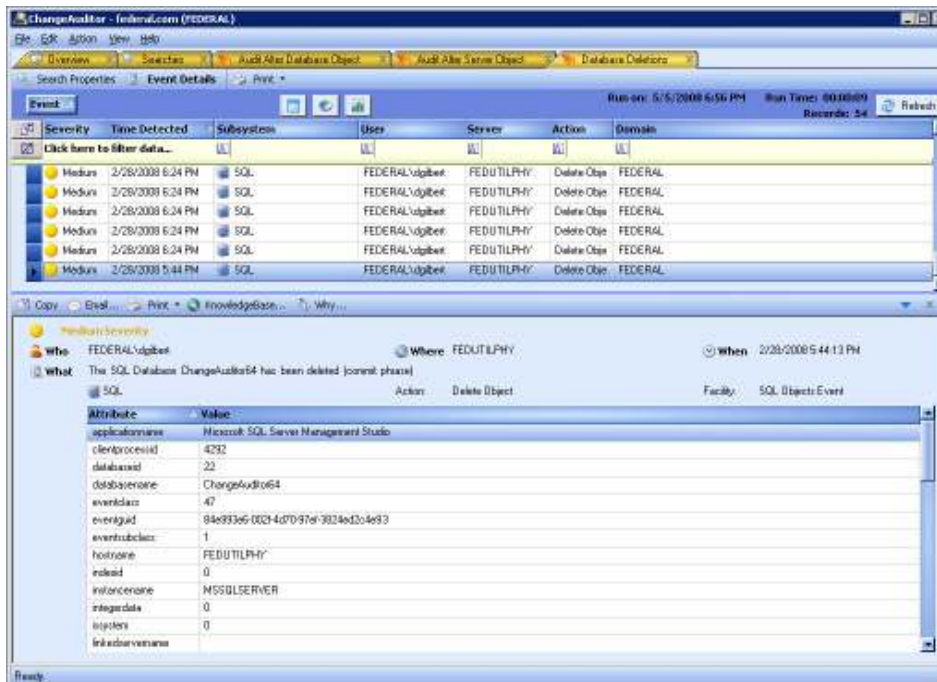

- Message Read by Non-Owner
 - Message Deleted by Non-Owner
 - Inbox Opened By Non-Owner
 - Mailbox Store Dismounted
 - Message Permanently Deleted by Owner
 - Audit Drop Database
 - Audit Add Login to Server Role
 - Audit Add Member to Database Role
 - Database Deletions
- **Support for Clustered Configurations:** ChangeAuditor 4.6 now supports clustered configurations for Exchange 2000, 2003 and 2007.

With ChangeAuditor for Exchange 4.6 you can easily see who has gained access into another users' mailbox, allowing organizations to quickly learn who accessed, deleted, copied, moved or created e-mails from that mailbox.

Quickly see the Who, What, Where, and When of mailbox changes.

ChangeAuditor includes ~100 new built-in Exchange and SQL reports that help you to easily prove compliance, while driving security.
